Today's best HP Gaming Pavilion 15-dk0046nr dealsHP Pavilion Gaming Laptop... Hp's \$909 15-dk0046nr Gaming Pavilion is an entry-level gaming laptop with a strong Intel Core i7 processor and a Nvidia GeForce GPU, with an agile SSD and a great battery life, all wrapped in an amazing, quite portable design.. However, the dim, somewhat boring screen makes the laptop and gamers a major disservice. However, its combination of specs, power and endurance won the laptop a spot on our best cheap gaming laptops under \$1,000 page. The \$799 base model of the HP 15-dk0046nr Game Pavilion has an Intel Core i5-9300H CPU, 8GB of RAM, a 2GB NVMe M.2 M.2 SSD PCIe and a 2GB Nvidia GeForce GTX 1050 GPU with 3GB of VRAM. The \$909 model we review, the 15-dk0046nr, has an Intel Core i7-9750H processor with 12GB of RAM, a 256GB NVMe M.2 SSD PCIe and a 256GB Nvidia GeForce GTX 1650 GPU with 4GB of VRAM. Meanwhile, the \$889 model gives you an Intel Core i7-9750H CPU, 8GB of RAM, a 256GB PCIe NVMe M.2 SSD and a Nvidia GeForce GTX 1660 Ti GPU with 6GB of VRAM. DesignOne thing is for sure: the Pavilion does not resemble the typical gaming laptop. Instead of the tired black-and-white motif, the laptop has black with emerald accents. And if you really want to get out of the beaten path, you can get the system with purple flourishes. The laptop's opening reveals a green backlit keyboard with some funky polygon-shaped speakers. (Image credit: Laptop Mag) Beyond pure aesthetics, laptop design also has practical flaws. For example, the small, thin size of the power button made it uncomfortable to use. Hp's 15-dk0046nr Game Pavilion weighs 5 pounds and measures 14.2 x 10.1 x 0.9 inches. It is lighter than the Acer Nitro 5 (5.7 pounds, 15.9 x 11.1 x 1.1 inches) and the Dell G5 15 SE (5.6 pounds, 14.2 x 9.9 x 0.8 inches). However, the 14.2 x 9.9 x 0.8-inch Asus ROG Zephyrus G GA502 is the lightest system at 4.5 pounds. PortsThere is a decent amount of ports in Hall 15. (Image credit: Laptop Mag) On the left side of the laptop is a USB port type A 3.1, a USB port type C 3.1, HDMI port, an Ethernet RJ-45 port and an SD media card reader. (Image credit: Laptop Mag) On the right, you will find two additional USB 3.1 type A ports and headphone connectors and power connectors. DisplayThe HP Gaming Pavilion 15.6-inch, 1920 x 1080 screen is not the brightest or the most colorful, but managed to offer good image quality, however. To prove it, I saw the first trailer for Star Wars: The Rise of Skywalker. I could clearly see the individual parts of Rey's lightsaber, the desert environments of the trailer seemed sharp, and the smaller details during the action scenes (such as the intense bright green of the fire blaster) actually appeared. (Image credit: Laptop Mag) Also Play Shadow of the Tomb Raider and was impressed with how good the game looked. The game's ancient Incas tombs looked positively beautiful with standout lighting effects and bright stone. From torch graves to lush lush Jungles, tomb raider's last game was a pleasure for the eyes when experienced through the screen of this laptop. In terms of brilliance, the Pavilion fails compared to competition. He averaged 241.2 nights, which is evident compared to Acer Nitro 5 (275 nights), Dell G5 15 SE (270 nights) and category average (264 nits). It only occupies a slightly better position than the Asus ROG Zephyrus G GA502 (240 nits). In addition, its sRGB range percentage was 65.8%, which is lower than the sRGB percentage of Nitro Steel 5 (103%), the Asus ROG Zephyrus' (71%) and dell G5 15's (154%). However, it was only slightly below the average entry-level games. Keyboard and TouchpadThe keyboard keys in the HP Game Pavilion felt agile and responsive. Using the 10FastFingers typing test, I could type 46 words per minute on hp's laptop keyboard, lower than my usual average. (Image credit: Laptop Mag) This was a little slower than the speed with which I normally write with the keyboard on my desktop computer at home, where I had an average of 51 wpm. The 2.4 x 4.6-inch touchpad delivered firm, springy reviews. However, I think HP should have used discrete mouse buttons since it continually hit the wrong sides of the touchpad whenever you wanted to click left or right. However, the gestures of Windows 10 worked smoothly. I had no problem using it to do what I needed and do not experience contribution delays. AudioAt full volume, I flew the energetic and jazzy song of Super Mario Odyssey Jump Up, Super Star and the song came out loud and clear of the bang & dual speakers Olufsen on the laptop. Then, I tried how well the most serious Skyrim Dragonborn song would sound and it operates and I wasn't disappointed. (Image credit: Laptop Mag) The song featured strong trumpets, lyrics and pianos that all clearly blamed on laptop speakers. It sounded good to me, not at all silenced. Games, graphics and VRThe Hall 15 packs a GPU Nvidia GeForce GTX 1650 with 4GB of VRAM. In the laptop's highest graphical configuration (1080p with Ultra configuration), modern graphical wonders such as Far Cry New Dawn and Hitman averaged 54 frames per second and 57 fps, respectively. Notably, he ran Far Cry New Dawn considerably better than the Nitro 5 (GTX 1650, 40 FPS) in the highest configuration (although Hitman only ran slightly worse on the Acer at 56 FPS). (Image credit: Laptop Mag) When faced with zephyrus (GeForce GTX 1660 Ti), Hall 15 does not hold up too. The Asus ran best hitman (73 fps), Rise of the Tomb Raider better (43 fps vs HP's 29 fps), Shadow of the Tomb Raider better (36 fps vs HP's 31) and Grand Theft Auto V better (57 fps vs HP's 39 fps). The HP gaming laptop also doesn't Hitman almost as well as the G5 15 (GTX 1650, 85 fps to 1080 with Ultra graphics). Now, going through my personal experience, I would still say that hp 15's Game Pavilion ran Shadow of the Tomb Raider pretty well in the highest graphic scenes. Naturally, in the linear and closed parts of the game, the it would turn between 40 and 60 every time it crossed the linear portions of the game, but in wider open-center areas like Paititi, FPS would plunge into the range of the 30s to 40s. The best PC games to play right now | Portable MagOn virtual reality front, this hp gaming laptop averages 5.9 fps in the steamVR performance test.. It is enough to exceed the average of 5.3, the G5 15 and the Nitro 5, which have an average of 5.6 fps. The Asus continued to dominate, with a score of 9.2.Performancel decided to test the Intel Core i7-9750H processor in Hall 15 by playing 22 Google Chrome tabs, each playing a YouTube video running at 1080p. Several videos were frozen or struggled to play. But, despite all this activity, he still played Tomb Raider Shadow with frame speed drops only during the initial load of play. During the Geekbench 4.3 global performance test, Hall 15 surpassed G5 15 (16,722, i5-9300H CPU), Zephyrus (14,106, AMD Ryzen 7 3750H) and Nitro 5 Core (11,603, i5-8300H CPU) with a score of 21,326. Hp also easily outperformed the average of 15,566 entry-level game laptops. Hall 15 took 10 minutes and 42 seconds to transcode a 4K video at 1080p. That's faster than the competition, as well as the 14:28 category average. Best Graphics performance When it comes to file transfer speed, hp's Game Pavilion SSD copied 4.97GB in 14.5 seconds, which is a transfer rate of 351 megabytes per second. This is better than the average of 307.2 MBps and the G5 15's (256GB M.2 PCIe NVMe SSD) 130.1 MBps. However, both Zephyrus laptops (512GB M.2 PCIe NVMe SSD) and Nitro 5 laptops (512GB SSD) were faster, with scores of 424 and 535.7MBps, respectively. Battery lifeFor a gaming laptop, even an entry-level system, the HP 15 Gaming Pavilion has a fairly long battery life. The system lasted 5 hours and 26 minutes in our battery test, consisting of continuous web surfing at 150 nights of brightness. That's just one second behind the entry-level game average of 5:27, but enough to beat Zephyrus' 4:48 and Nitro 5 4:22. However, the G5 15 lasted a jaw dropping 6:53. WebcamAfter docking four photos of myself with the webcam of the HP 15 Games Pavilion, I think I can confidently say that the webcam is terrible. (Image credit: Laptop Mag) The colors were not inaccurate, but the light in the photos was quite blown. The light bulb looked like a white orb. Each image had this blurry and muddy quality for them. HeatI played 15 minutes of Shadow of the Tomb Raider in Hall 15 and when I finished, it was pretty cool compared to other notebooks. Our heat gun detected that the touchpad was 96 degrees Fahrenheit, the the keyboard was 94 degrees, and the lower part of the laptop was 95 degrees. It's not the hottest I've ever heard on a gaming machine while playing, but still significant. Outside the touchpad, the notebook touches the line of our 95-degree comfort level. (Image credit: Laptop Mag) This is one of a number of it should be noted that laptop fans can also be noticeably strong when playing a graphical game of taxes such as Shadow of the Tomb Raider for an extended period. After cooling down, we put the pre-laptop points back on after running a 15-minute YouTube video. The touchpad, center and bottom of the notebook recorded 78, 83 and 86 degrees, respectively. &Software WarrantyHP loaded Pavilion 15 with several manufacturer-branded programs, including the HP JumpStart introductory program.Third-party programs includes McAfee LiveSafe, Simple Solitaire, Mahjongg Candy, Adobe Photoshop Elements 2019, Paint 3D, Groove Music, Skype, Spotify, the WildTangent Games launcher and the laptop The HP Pavilion 15-dk0046nr comes with a standard 1-year warranty. See how HP came to our annual special reports, including Tech Support Showdown, Best and Worst Brands and Best and Worst Gaming Brands. Overall, the HP 15-dk0046nr Game Pavilion doesn't have to sleep simply because it's a budget system. At \$909, the laptop packs some powerful specs including an Intel Core i7 CPU and Nvidia GTX 1660 GPU which means the notebook can play games at good frame speeds. And at almost 6 hours of battery life, it has envelope resistance. However, if you're looking for a little more graphic oomph, the \$1,099 Asus ROG Zephyrus G GA502 offers more power and a better display. However, if you are looking for a surprisingly powerful entry level system at a great price, the HP 15 Pavilion should be at the top of your list. List.
